

Community Air Monitoring Program
January 26, 2009 through February 1, 2009

Community air monitoring data is reviewed and compared to specific NYSDEC/NYSDOH approved criteria, known as “Action Limits”. As a result of this evaluation process, site conditions are categorized into two categories, “Operational Condition” and “Action Condition”. The “Operational Condition” is applicable when the data is below the “Action Limits” noted in the table below. The “Action Condition” occurs when one or more fifteen minute average measurement for Dust (PM₁₀), Total Volatile Organic Compounds (TVOC), Naphthalene or Odor Intensity exceeds the background or upwind measurement by the “Action Limits” in the table below. During the period from January 26, 2009 through February 1, 2009 there were six Fixed Air Monitoring (FAM) locations measuring Total Volatile Organic Compounds (TVOC) and Particulate Matter (PM₁₀). **Fifteen-minute averages for odor intensity, naphthalene, TVOC, and PM₁₀ data remained in Operational Condition.**

On Thursday, January 29, 2009 and Sunday, February 1, 2009 there were periods of elevated concentrations of dust for a combined total of forty-two minutes at FAM-3. These elevated concentrations were caused by exhaust venting from a generator and pump in close proximity to FAM-3. This dust was not associated with intrusive activities; therefore the site remained in the Operational Condition (less than the Action Limit).

The elevated concentrations are shown on the following two tables.

PM₁₀ = Respirable Particulate Matter (dust)
TVOC = Total Volatile Organic Compound
ppm = Parts per million (by volume)
µg/m³ = Micrograms per cubic meter

¹ Highlighted values indicate dates and locations that require further comparison to the action limits based on wind direction, off site and on site activities (see Table 2).

All reported PM₁₀, TVOC, and odor intensity values represent 15-minute averages.
Odor Intensity is measured 0-8 on the n-butanol scale.

Weekly Elevated Concentration above the Action Limit Summary Report

Reporting Period (Monday – Sunday): Start Date: 1/26/09 End Date: 2/1/09

<i>Summary of Elevated Concentrations</i>															
Parameter	Date	Station	Start Time	End Time	Duration (Mins)	Action Limit	Approx. Start Dir* and speed	Approx. End Dir* and speed	Location of background conc.	Elevated Conc. Max	Background Conc. **	Max Conc. – Background Conc.**	Site Condition	Site Activity During the Period (if applicable)	Actions Taken
<i>Elevated Concentrations Above the Action Level</i>															
PM₁₀	Thu 1/29/09	FAM 3	7:38AM	7:53AM	16	150	W 13.5mph	W 13.4mph	FAM 1	341.3	5.7	335.6	Operational	Waste water treatment plant in operation (non-site intrusive) ¹	The AM technician contacted the site CM and the site Health and Safety Officer. The AM technician reported that the elevated concentrations were due to exhaust venting from a generator/pump in close proximity of FAM3. The generator will be replaced because of the high particulates it produces during start-up.
PM₁₀	Sun 2/1/09	FAM 3	11:25PM	11:51PM	27	150	VAR	VAR	FAM 4	291.5	23.8	267.7	Operational	Waste water treatment plant in operation (non-site intrusive) ¹	The AM technician contacted the site CM and logged into the database from home. The AM technician reported that the elevated concentrations were due to exhaust venting from a generator/pump in close proximity of FAM3.

* Wind Directions are presented by octant (i.e. N, NE, E, SE, S, SW, W, NW)

** Background concentrations are equal to the upwind concentrations unless winds are determined to be variable.

FAM – Real time fixed air monitoring station

PAM – Real time portable air monitoring station

NA – Not applicable

ND – No data available

VAR – Variable winds

PM₁₀ – Particulate matter (reported in $\mu\text{g}/\text{m}^3$)

TVOC – Total volatile organic compound (reported in ppm)

¹ In accordance with DER-10 this type of event is not considered to be an exceedance because the activity was not associated with site intrusive activities.
